

UNCOMPLICATED & AT YOUR SERVICE

Your hair doesn't end at the appointment.

Everything you need to keep your quick weave fresh and your natural hair healthy underneath.

First 24 hours

- ♡ Give the bond a day to set. Keep your hair dry and skip heavy sweating for the first 24 hours.
- ♡ Some tightness is normal. Burning, stinging, or pain is not. Reach out to me right away.

Every night

- ♡ Wrap your hair or wear a silk/satin bonnet.
- ♡ A satin pillowcase is a bonus for less frizz and tangling.
- ♡ Never go to bed with damp hair.

Keep the roots dry

- ♡ Water and oils weaken the bond that holds your tracks, so don't soak or wash your hair at the roots.
 - ♡ Keep oils and heavy products away from your scalp and edges.
 - ♡ To refresh, mist the lengths lightly with a leave-in spray, staying away from the roots.
-

Working out

- ♡ Go for it! Use a sweatband and keep your hair in a loose, low ponytail.
 - ♡ Wipe sweat from your hairline after, then dry your roots on cool. Sweat can loosen the bond over time.
-

Be gentle

- ♡ Detangle from ends to roots.
 - ♡ Use low to medium heat with a heat protectant. Keep high heat away from the roots.
 - ♡ Don't pull, pick, or tug at your tracks.
 - ♡ If a track starts lifting, don't glue it back down yourself. Reach out to me.
-

Leave-out care

- ♡ Keep your leave-out moisturized based on your porosity below, using products only on your leave-out, not near the tracks.
- ♡ Limit flat ironing so your leave-out doesn't get heat damaged and stop blending.

- ♡ Wrap or tuck it under your bonnet every night.
-

Your porosity

For your leave-out.

Low porosity

High porosity

Not sure? If your hair takes a while to get fully wet and products seem to sit on top, you're likely low porosity. If it soaks up water fast and dries fast, you're likely high. Or just ask me at your next appointment.

Low porosity

Moisture sits on top of your hair and products tend to build up.

- ♡ Use light, water-based leave-ins on your leave-out.
 - ♡ Apply products to slightly warm hair so they absorb.
 - ♡ Skip heavy butters and thick creams.
 - ♡ Moisturize every few days, not daily.
-

Sensitive scalp

- ♡ Some people are sensitive to bonding glue. If you've reacted to glue before, tell me before your appointment.
- ♡ Burning, nonstop itching, bumps, or redness after your install can mean a glue reaction. Reach out to me right away.
- ♡ Choose fragrance-free, alcohol-free products for your leave-out.
- ♡ Patch test anything new behind your ear first.

2–4 weeks

- ♡ It's time for removal. Wearing a quick weave longer can lead to breakage and buildup.
- ♡ Never pull or peel your quick weave out. It has to come out with glue remover, or it can rip your hair.
- ♡ Book your removal with me, and plan a wash and deep condition for your natural hair right after.

Scalp feeling off?

Persistent pain, bumps, redness, worsening flakes, or irritation isn't something to ignore. Reach out to me.

thanks for trusting me ♡
